Developmental Dysgraphia Brenda Rapp 2019-11-27 The ability to communicate with written language is critical for success in school and in the workplace. Unfortunately, many children suffer from developmental dysgraphia—impairment in acquiring spelling or handwriting skills—and this form of impairment has received relatively little attention from researchers and educators. This volume brings together, for the first time, theoretically grounded and methodologically rigorous research on developmental dysgraphia, presented alongside reviews of the typical development of spelling and writing skills. Leading experts on writing and dysgraphia shed light on different types of impairments that can affect the learning of spelling and writing skills, and provide insights into the typical development of these skills. The volume, which contributes both to the basic science of literacy and to the applied science of diagnosing and treating developmental dysgraphia, should interest researchers, educators, and clinicians. This book was originally published as a special issue of *Cognitive Neuropsychology*.

Word Finding Vocabulary Test Catherine Renfrew 2010-11-02 The extent to which pictures, objects, arranged in order of difficulty, can be named correctly is assessed using this test. Most of the objects illustrated have no alternative name, so the responses of children can be quickly measured.

Completely revised, this new edition contains 50 line-drawn pictures, a manual and a photocopiable scoring form. Catherine Renfrew's three tests have been used for many years and provide a means of assessing children's speech and language. All tests are suitable for use with 3-8 year olds are norm referred to enable therapists to produce comparative results. Norms are given at six-monthly intervals for both the Action Picture Test and Word finding Vocabulary and monthly for the Bus Story Test.

Frames of Reference for Pediatric Occupational Therapy Paula Kramer 2018-12-07 Publisher's Note: Products purchased from 3rd Party sellers are not guaranteed by the Publisher for quality, authenticity, or access to any online entitlements included with the product. Frames of Reference for Pediatric Occupational Therapy, Fourth Edition, uses frames of reference for diagnostic categories (neuro-development, social participation, etc.) as effective blueprints for applying theory to pediatric OT practice. Updated with new chapters, case examples, and a new focus on evidence-based practice. This proven approach helps students understand the "why" of each frame of reference before moving on to the "how" of creating effective treatment programs to help pediatric clients lead richer, fuller lives. The book first covers the foundations of frames reference for pediatric OT (Section I), and then covers commonly used frames of reference such as motor skill acquisition, biomechanical, and sensory integration (Section II). A final section discusses newer focused/specific frames of reference like handwriting skills and social participation. A standardized format within each frame of reference chapter covers the same elements (Theoretical Base, Supporting Evidence, the Function/Dysfunction Continuum, Guide to Evaluation, and Application to Practice) to help students build the knowledge and skills needed for effective practice.

The Developing Visual Brain Janette Atkinson 2002-05-30 The Developing Visual Brain presents the definitive, authoritative work on the developing visual system, one based on over 20 years of research. While reviewing and evaluating the exciting progress that has been made in this area, the book additionally sets out and describes new areas for research in this area.

Occupational Therapy for Children Jane Case-Smith 2010 Focusing on children from infancy to adolescence, Occupational Therapy for Children and Adolescents, 7th Edition provides comprehensive, full-color coverage of pediatric conditions and treatment techniques in all settings. Its emphasis on evidence-based practice includes updated references, research notes, and explanations of the evidentiary basis for specific interventions. And coverage of new research and theories, new techniques, and current trends, with additional case studies, keeps you in step with the latest advances in pediatric OT practice. Written by educators Jane Case-Smith and Jane Clifford O'Brien, this text is the Number One book in pediatric OT! Case studies help you apply concepts to actual situations you may encounter in practice. Research Notes boxes and evidence-based summary tables help you interpret evidence and strengthen your clinical decision-making skills. Learning resources on Evolve include video clips, review activities, and additional case studies. Learning objectives indicate what you will be learning in each chapter and serve as checkpoints in studying for examinations. A glossary makes it easy to look up key terms. NEW video clips and case studies on the Evolve website demonstrate important concepts and rehabilitation techniques. NEW Autism Spectrum Disorder chapter contains important information for OTs not addressed in other texts. NEW Neuromotor: Cerebral Palsy chapter addresses the most prevalent cause of motor dysfunction in children. NEW Adolescent Development chapter helps you manage the special needs of teenagers and young adults. NEW contemporary design includes full-color photos and illustrations. UPDATED content and references ensure you have access to the comprehensive, research-based information that will guide you in making optimal decisions in practice.

Developmental Coordination Disorder

David Sugden

2005-01-28 The term Developmental Coordination Disorder (DCD) is used to describe a group of children who have difficulty with tasks involving movement such that it interferes with their daily living or academic progress. As with other developmental disorders such as autistic spectrum disorder, attention deficit disorder and dyslexia, DCD is now a prominent concern of both researchers and practitioners. This text is aimed at both researchers and professionals who work in a practical manner with the condition and includes professionals in health, occupational therapists, physiotherapists, health visitors, paediatricians, and - in the educational field - teachers and others who are in daily contact with the children - their parents. The essence of the text is that work with children should be guided by research evidence driving the clinical practice which in turn raises more questions for research. The authors in this text have both experience in research and are engaged in the day-to-day clinical work with children and bring both of these to bear in the chapters they have written.
