Prosperity in a Time of Brilliant Technologies Erik

Bestseller. A “fascinating” (Thomas L. Friedman, New York Times) look at how digital technology is transforming our work and our lives. In recent years, Google’s autonomous cars have logged thousands of miles on American highways and IBM’s Watson trounced the best human Jeopardy! players. Digital technologies—with hardware, software, and networks at their core—will in the near future diagnose diseases more accurately than doctors can, apply enormous data sets to transform retailing, and accomplish many tasks once considered uniquely human. In *The Second Machine Age* MIT’s Erik Brynjolfsson and Andrew McAfee—two thinkers at the forefront of their field—reveal the forces driving the reinvention of our lives and our economy. As the full impact of digital technologies is felt, we will realize immense bounty in the form of dazzling personal technology, advanced infrastructure, and near-boundless access

to the cultural items that enrich our lives. Amid this bounty will also be wrenching change. Professions of all kinds—from lawyers to truck drivers—will be forever upended. Companies will be forced to transform or die. Recent economic indicators reflect this shift: fewer people are working, and wages are falling even as productivity and profits soar. Drawing on years of research and up-to-the-minute trends, Brynjolfsson and McAfee identify the best strategies for survival and offer a new path to prosperity. These include revamping education so that it prepares people for the next economy instead of the last one, designing new collaborations that pair brute processing power with human ingenuity, and embracing policies that make sense in a radically transformed landscape. A fundamentally optimistic book, *The Second Machine Age* alters how we think about issues of technological, societal, and economic progress.

State-permeated Capitalism in Large Emerging Economies Andreas Nölke 2019-08-30 This book systematically analyzes the economic dynamics of large emerging economies from an extended

Comparative Capitalisms perspective. Coining the phrase 'state-permeated capitalism', the authors shift the focus of research from economic policy alone, towards the real world of corporate and state behaviour. On the basis of four empirical case studies (Brazil, India, China, South Africa), the main drivers for robust economic growth in these countries from the 2000s until the 2010s are revealed. These are found, in particular, in mutual institutional compatibilities of 'state-permeated capitalism', in their large domestic markets, and beneficial global economic constellations. Differences in their institutional arrangements are explored to explain why China and India have been more economically successful than Brazil and South Africa. The authors highlight substantial challenges for the stability of state-permeated capitalism and assess the potential future growth, sustainability and likely pitfalls for these large emerging economies. Opening further

avenues for empirical and theoretical research, this book raises questions for the future of the global economic order and should appeal to academics, graduate students and advanced undergraduates in politics, economics, economic sociology and development studies. It should also prove a worthwhile and provocative read for development practitioners and policy-makers.

Excellence Gaps in Education Jonathan A. Plucker 2020-01-15 In Excellence Gaps in Education, Jonathan A. Plucker and Scott J. Peters shine a spotlight on "excellence gaps"—the achievement gaps among subgroups of students performing at the

highest levels of achievement. Much of the focus of recent education reform has been on closing gaps in achievement between students from different racial, ethnic, or socioeconomic backgrounds by bringing all students up to minimum levels of proficiency. Yet issues related to excellence gaps have been largely absent from discussions about how to improve our schools and communities. Plucker and Peters argue that these significant gaps reflect the existence of a persistent talent underclass in the United States among African American, Hispanic, Native American, and poor students, resulting in an incalculable loss of potential among our fastest growing populations. Drawing on the latest research and a wide range of national and international data, the authors outline the scope of the problem and make the case that excellence gaps should be targeted for elimination. They identify promising interventions for talent development

already underway in schools and provide a detailed review of potential strategies, including universal screening, flexible grouping, targeted programs, and psychosocial interventions. Excellence Gaps in Education has the potential for changing our national conversation about equity and excellence and bringing fresh attention to the needs of high-potential students from underrepresented backgrounds.

The Road Ahead for America's Colleges and Universities Robert B. Archibald 2017-07-03 The US higher education system is on the verge of a revolution, so some observers claim. Archibald and Feldman, leading analysts, provide an incisive overview of the challenges facing and possibilities for America's universities and colleges in their training future generations. And they demonstrate that our higher education system is resilient and adaptable enough to weather the internal external

and technological threats without changing campuses beyond recognition. The Road Ahead for America's Colleges and Universities examines the threats posed to the current health of higher education by rising tuition and falling government support, as well as from new digital technologies rippling through the entire economy. Some predict disaster, pointing to high costs, exploding debt, and a digital tsunami that supposedly will combine to disrupt and sweep away many of the nation's higher education institutions, or change them beyond recognition. Archibald and Feldman provide a more nuanced view. They argue that the bundle of services that four-year colleges and universities provide will retain its value for the traditional age range of college students. Less certain, Archibald and Feldman argue, is whether the system will continue to be a force for social and economic opportunity. The threats are most dire at

schools that disproportionately serve America's most underprivileged students. At the same time, growing income inequality reduces the ability of many students and their families to pay for higher education. Archibald and Feldman suggest a range of policy options at the state and federal level that will help America's higher education system continue to fulfill its promise.

The Pakistan Paradox Christophe Jaffrelot

2015-08-15 Pakistan was born as the creation of elite Urdu-speaking Muslims who sought to govern a state that would maintain their dominance. After rallying non-Urdu speaking leaders around him, Jinnah imposed a unitary definition of the new nation state that obliterated linguistic diversity. This centralisation - 'justified' by the Indian threat - fostered centrifugal forces that resulted in Bengali

secessionism in 1971 and Baloch, as well as Mohajir, separatisms today. Concentration of power in the hands of the establishment remained the norm, and while authoritarianism peaked under military rule, democracy failed to usher in reform, and the rule of law remained fragile at best under Zulfikar Bhutto and later Nawaz Sharif. While Jinnah and Ayub Khan regarded religion as a cultural marker, since their time the Islamists have gradually prevailed. They benefited from the support of General Zia, while others, including sectarian groups, cashed in on their struggle against the establishment to woo the disenfranchised. Today, Pakistan faces existential challenges ranging from ethnic strife to Islamism, two sources of instability which hark back to elite domination. But the resilience of the country and its people, the resolve of the judiciary and hints of reform in the army may open up new possibilities.

Building an Opportunity Society Lewis D. Solomon 2017-09-08 Twenty-first-century US policymakers face a great challenge: How can federal government help more people achieve the American dream? Specifically, how can we provide greater opportunities for less-prosperous individuals, enabling them to succeed through hard work, on

their merits, and take increased responsibility for their lives? Lewis D. Solomon sees this as the challenge of our time. He seeks to thread the fine public policy needle between social democratic efforts to perfect the world and those who negatively view public sector programs. Based on the premise that capitalism is not inherently unjust and defective, and American capitalism's structural features do not inexorably thwart opportunity, *Building an Opportunity Society* offers the possibility of more limited, carefully structured, cost-effective, empirically verified federal policies and programs. Solomon first provides the background and context of many existing domestic challenges and problems that the current and proposed federal policies and programs seek to address. He then analyses the federal safety net that keeps Americans from poverty and helps reduce income inequality. Finally, he presents a lifecycle

analysis of current federal policies and programs, preventive and remedial, designed as part of the Entitlement State, but if restructured could facilitate the building of an Opportunity Society. Solomon challenges policymakers to take a fresh look at how best to achieve society's goals for all citizens.

Handbook of Experimental Economic Methodology

Guillaume R. Fréchette 2015-01-02 The Handbook of Experimental Economic Methodology, edited by Guillaume R. Fréchette and Andrew Schotter, aims to confront and debate the issues faced by the growing field of experimental economics. For example, as experimental work attempts to test theory, it raises questions about the proper relationship between theory and experiments. As experimental results are used to inform policy, the utility of these results outside the lab is questioned, and finally, as experimental economics tries to integrate ideas from other disciplines like

psychology and neuroscience, the question of their proper place in the discipline of economics becomes less clear. This book contains papers written by some of the most accomplished scholars working at the intersection of experimental, behavioral, and theoretical economics talking about methodology. It is divided into four sections, each of which features a set of papers and a set of comments on those papers. The intention of the volume is to offer a place where ideas about methodology could be discussed and even argued. Some of the papers are contentious---a healthy sign of a dynamic discipline--while others lay out a vision for how the authors think experimental economics should be pursued. This exciting and illuminating collection of papers brings light to a topic at the core of experimental economics. Researchers from a broad range of fields will benefit from the exploration of these important questions.

Students of Color and the Achievement Gap

Richard R. Valencia 2015-03-05 Students of Color and the Achievement Gap is a comprehensive, landmark analysis of an incontrovertible racialized reality in U.S. K-12 public education---the relentless achievement gap between low-socioeconomic students of color and their economically advantaged White counterparts. Award winning author and scholar Richard Valencia provides an authoritative and systemic treatment of the achievement gap, focusing on Black and Latino/Latina students. He examines the societal and educational factors that help to create and maintain the achievement gap by drawing from critical race theory, an asset-based perspective and a systemic inequality approach. By showing how racialized opportunity structures in society and schools ultimately result in racialized patterns of academic achievement in schools, Valencia shows how the various indicators of the

achievement gap are actually symptoms of the societal and school quality gaps. Following each of these concerns, Valencia provides a number of reform suggestions that can lead to systemic transformations of K-12 education. Students of Color and the Achievement Gap makes a persuasive and well documented case that school success for students of color, and the empowerment of their parents, can only be fully understood and realized when contextualized within broader political, economic, and cultural frameworks.

Playing with Fire Yilmaz Akyüz 2017-06-30

Starting in the early 1990s many emerging and developing economies (EDEs) liberalized their capital accounts, allowing greater freedom for international lenders and investors to enter their markets as well as for their residents to borrow and invest in international financial markets. Despite recurrent crises, liberalization has continued and in fact accelerated in the new millennium. Integration has been greatly facilitated by progressively looser monetary policy in the United States, notably the policies that culminated in debt crises in the United States and Europe and the ultra-easy monetary policy adopted in response. Not only have their traditional cross-border linkages been deepened and external balance sheets expanded rapidly, but also foreign presence in their domestic financial markets and the presence of their nationals in foreign markets have reached unprecedented levels. As a result new channels have emerged for the

transmission of financial shocks from global boom-bust cycles. Almost all EDEs are now vulnerable irrespective of their balance-of-payments, external debt, net foreign assets and international reserve positions although these play an important role in the way such shocks could impinge on them. This is a matter for concern since the multilateral system still lacks mechanisms for orderly resolution of financial crises with international dimensions.

Playing with Fire provides an empirical account of deeper integration of EDEs into the global financial system and discusses its implications for stability and growth, focusing on the role of policies in the new millennium in both EDEs and the United States and Europe.

The Internationalists: Globalization, the Age of Information and the Developing World Ascent

Christopher Jannou 2015-06-26 Technology and globalization have created unprecedented

opportunities for wealth creation whilst unleashing some of the most impressive forces for human advancement the world has ever known. These forces have also triggered what will likely be the last great development push the Modern Age will see. By 2050, the developing world as it is currently defined will be no more; with the exception of a few under-performers, there will only be the developed one. The Internationalists is a sweeping look at the forces shaping this next surge of economic and human development; from an investor who has logged the hard miles to know his subject inside and out.

Privacy and Capitalism in the Age of Social Media

Sebastian Seignani 2015-08-27 This book explores commodification processes of personal data and provides a critical framing of the ongoing debate of privacy in the Internet age, using the example of social media and referring to interviews with users. It advocates and expands upon two main theses: First, people's privacy is structurally invaded in contemporary informational capitalism. Second, the best response to this problem is not accomplished by invoking the privacy framework as it stands, because it is itself part of the problematic nexus that it struggles against. Informational capitalism poses weighty problems for making the Internet a truly social medium, and aspiring to sustainable privacy simultaneously means to struggle against alienation and exploitation. In the last instance, this means

opposing the capitalist form of association – online and offline.

The Rise of Africa's Middle Class Henning Melber 2016-12-15 Across Africa, a burgeoning middle class has become the poster child for the 'Africa rising' narrative. Ambitious, aspirational and increasingly affluent, this group is said to embody the values and hopes of the new Africa, with international bodies ranging from the United Nations Development Programme to the World Bank regarding them as important agents of both economic development and democratic change. This narrative, however, obscures the complex and often ambiguous role that this group actually plays in African societies. Bringing together economists, political scientists, anthropologists and development experts, and spanning a variety of case studies from across the continent, this collection provides a much-needed corrective to the received wisdom within

development circles, and provides a fresh perspective on social transformations in contemporary Africa.

Summary of White Trash Instaread 2016-09-15
Summary of White Trash by Nancy Isenberg | Includes Analysis Preview: White Trash by historian Nancy Isenberg is a riveting chronicle of class in America as explored through the role and the plight of the white underclass from the days of colonial settlers to the present. Despite the founders' declaration that "all men are created equal," the reality of life in America has continuously told a different story. With careful research, Isenberg reviews the popular American myth of equality for all and illustrates how poor whites, or "white trash," have traditionally been a much-derided, marginalized part of American society. Class hierarchy traces back to America's earliest history. Contrary to the myth that American colonial

settlers were either enterprising businessmen or devout Christians fleeing religious persecution, the majority were actually economically challenged outcasts or social burdens that the English were happy to be rid of. Many were criminals, vagrants, and orphans who then became indentured servants with no landowning rights. Thus, from... Consumer Involvement in Private EU Competition

Law Enforcement Maria Ioannidou 2015-09-03

Despite the growing importance of 'consumer welfare' in EU competition law debates, there remains a significant disconnect between rhetoric and reality, as consumers and their interests still play only an ancillary role in this area of law. Consumer Involvement in Private EU Competition Law Enforcement is the first monograph to exclusively address this highly topical and much debated subject, providing a timely and wide-ranging examination of the need for more active consumer participation in competition law. Written by an expert in the field, it sets out a comprehensive framework of policy implications and arguments for greater involvement, positioning the debate in the context of a broader EU law perspective. It outlines pragmatic approaches to remedial and procedural measures that would enable consumer empowerment. Finally, the book

identifies key institutional and political obstacles to the adoption of effective measures, and suggests alternative routes to enhance the role of consumers in private competition law enforcement. The book's innovative approach, combining normative analysis and practical solutions, make it invaluable for academics, policy-makers, and practitioners in the field.

The Future, Declassified Mathew Burrows

2014-09-09 Twenty-five years ago when Mathew Burrows went to work for the CIA as an intelligence analyst, the world seemed frozen. Then came the fall of the Berlin Wall and the implosion of the Soviet Union; suddenly, unpredictability became a universal theme and foresight was critical. For the past decade, Burrows has overseen the creation of the Global Trends report—the key futurist guide for the White House, Departments of State and Defense, and Homeland Security. Global

Trends has a history of making bold predictions and being right: * In 2004, it argued that al-Qaeda's centralized operations would dissolve and be replaced by groups, cells, and individuals—the very model of the 2012 Boston bombings. * In 2008, it included a scenario dubbed October Surprise, imagining a devastating late-season hurricane hitting an unprepared New York City. In *The Future, Declassified*, Burrows—for the first time—has expanded the most recent *Global Trends* report into a full-length narrative, forecasting the tectonic shifts that will drive us to 2030. A staggering amount of wholesale change is happening—from unprecedented and widespread aging to rampant urbanization and growth in a global middle class to an eastward shift in economic power and a growing number of disruptive technologies. Even our physical geography is changing as sea levels rise and faster commercial

shipping routes open up through a warming Arctic region. The book concludes with its most provocative section: four fictional paths to 2030 with imagined storylines and characters based on analysis by the most authoritative figures in the intelligence community. As Burrows argues, we are living through some of the greatest and most momentous developments in history. Either we take charge and direct those or we are at their mercy. The stakes are particularly high for America's standing in the world and for ordinary Americans who want to maintain their quality of life. Running the gamut from scary to reassuring, this riveting book is essential reading.

Class Size Peter Blatchford 2016-04-28 Much debate, research and commentary about class sizes in schools is limited because of an exclusive concern with class size and pupil academic attainment, and a neglect of classroom processes, which might help explain class size effects (or lack of them). Very little is known about the central question: how can teachers make the most of class size changes? Much of the commentary on class size effects has focused on Western and English-speaking countries but there are promising developments elsewhere, particularly the 'Small Class Teaching' initiatives in East Asia in the past decade, which have brought new knowledge and practical wisdom to the class size debate. This book seeks to move toward a clearer view of what we know and do not know about class size effects, and to identify future steps in terms of policy and research. There is a huge and exciting potential for international collaboration on

knowledge concerning class size effects which can help with research-informed policy. The book aims to draw out Eastern and Western international contexts which underpin any understanding of the role of class size in school learning. The book has chapters by an international team of experts on class size effects, including Maurice Galton and John Hattie. Chapters are organised into four main sections: Socio-cultural and political contexts to the class size debate in the East and West; Research evidence on class size; Class size and classroom processes likely to be related to class size changes; Professional development for small class teaching in East Asia.

The Rise of the Robots Martin Ford 2015-09-03 Intelligent algorithms are already well on their way to making white collar jobs obsolete: travel agents, data-analysts, and paralegals are currently in the firing line. In the near future, doctors, taxi-

drivers and ironically even computer programmers are poised to be replaced by ‘robots’. Without a radical reassessment of our economic and political structures, we risk the very implosion of the capitalist economy itself. In *The Rise of the Robots*, technology expert Martin Ford systematically outlines the achievements of artificial intelligence and uses a wealth of economic data to illustrate the terrifying societal implications. From health and education to finance and technology, his warning is stark – all jobs that are on some level routine are likely to eventually be automated, resulting in the death of traditional careers and a hollowed-out middle class. The robots are coming and we have to decide – now – whether the future will bring prosperity or catastrophe.

Collective Redress and EU Competition Law Eda Şahin 2018-12-13 Exploring obstacles to effective compensation of victims of competition infringements, this book categorises the types of victims harmed and the types of losses arisen from these infringements to identify to what extent there is a need for enhanced private competition law enforcement in the European Union (EU) and the best way to address this need. It shows that there is a genuine need for facilitating consumer damages actions and that consumer claims are the only claims that can be pursued in a collective redress action. In order to compensate consumers and overcome barriers to effective enforcement of their right to damages, it structures a collective redress action for consumers by considering the

following elements: i. the formation of the group, ii. the type of representative party iii. funding mechanisms and iv. calculation and distribution of damages.

The Political Economy and Media Coverage of the European Economic Crisis Julien Mercille

2014-08-27 The European economic crisis has been ongoing since 2008 and while austerity has spread over the continent, it has failed to revive economies. The media have played an important

ideological role in presenting the policies of economic and political elites in a favourable light, even if the latter's aim has been to shift the burden of adjustment onto citizens. This book explains how and why, using a critical political economic perspective and focusing on the case of Ireland. Throughout, Ireland is compared with contemporary and historical examples to contextualise the arguments made. The book covers the housing bubble that led to the crash, the rescue of financial institutions by the state, the role of the European institutions and the International Monetary Fund, austerity, and the possibility of leaving the eurozone for Europe's peripheral countries. Through a systematic analysis of Ireland's main newspapers, it is argued that the media reflect elite views and interests and downplay alternative policies that could lead to more progressive responses to the crisis.

Cracking the Emerging Markets Enigma G.

Andrew Karolyi 2015 Forward-thinking investors are constantly looking for the next BRIC-what foreign market is on the brink of expansive growth? Will these investments payoff, or are the potential risks too great? Investing in these emerging markets requires a careful analysis of potential risks and benefits which vary greatly from country to country and even from day to day. In *Cracking the Emerging Markets Enigma*, emerging markets expert Andrew Karolyi outlines a practical strategy for evaluating the opportunities and-more importantly-the risks of investing in

emerging markets. Karolyi's proposed system evaluates multiple dimensions of the potential risks faced by prospective investors. These categories of risk reflect the uneven quality or fragility of the various institutions designed to assure integrity in capital markets-political stability, corporate opacity, limits placed on foreign investors, and more. By distilling these analyses into a numerical scoring system, Karolyi has devised a way to assess with ease emerging markets by different dimensions of risk and across all dimensions together. This novel assessment framework already has been tested in the market to great success. Researchers, students, firms, and both seasoned and novice investors are poised to gain a clear understanding of how to evaluate potential investments in emerging markets to maximize profits.

responses to inequalities in the UK in 2017 in the wake of the 2008 Great Recession. Inequality is the issue that won't go away, a real world issue affecting all facets of society with political and economic developments such as austerity measures, Brexit and changes in political leadership impacting the inequality landscape. Six of the chapters examine the extent of economic inequalities and poverty using quantitative and qualitative methods that help map regional differences, compare the UK with the rest of the EU and go beyond the traditional measures and concepts. Seven chapters explore how inequalities have evolved since 2008 and have been tackled by policy makers in five

policy areas (health, housing, education, gender and immigration) taking into account the new legislative framework and in one party (labour). Finally, six others address the issue of the governance of inequality by looking at how inequality features in the political agenda of the devolved assemblies in Northern Ireland, Scotland, Wales as well as at a local level in Ipswich and London. Based on recent surveys and current academic thinking, this book provides an up-to-date account of the extent and distribution of inequalities in the UK, of the evolving ways in which inequalities are measured and addressed as well as the changing perception of inequalities by the general public and policy-makers.
