A unique collection of fantastical cat tales. Slave Stealers Timothy Ballard 2018-09-04 Follow two abolitionists who fought one of the most shockingly persistent evils of the world: human trafficking and sexual exploitation of slaves. Told in alternating chapters from perspectives

spanning more than a century apart, read the riveting 19th century first-hand account of Harriet Jacobs and the modern-day eyewitness account of Timothy Ballard. Harriet Jacobs was an African-American, born into slavery in North Carolina in 1813. She thwarted the sexual advances of her master for years until she escaped and hid in the attic crawl space of her grandmother's house for seven years before escaping north to freedom. She published an autobiography of her life, *Incidents in the Life of a Slave Girl*, which was one of the first open discussions about sexual abuse endured by slave women. She was an active abolitionist, associated with Frederick Douglass, and, during the Civil War, used her celebrity to raise money for black refugees. After the war,

she worked to improve the conditions of newly-freed slaves. As a former Special Agent for the Department of Homeland Security who has seen the horrors and carnage of war, Timothy Ballard founded a modern-day "underground railroad" which has rescued hundreds of children from being fully enslaved, abused, or trafficked in third-world countries. His story includes the rescue and his eventual adoption of two young siblings--Mia and Marky, who were born in Haiti. Section 2 features the lives of five abolitionists, a mix of heroes from past to present, who call us to action and teach us life lessons based on their own experiences: Harriet Tubman--The "Conductor"; Abraham Lincoln--the "Great Emancipator"; Little Mia--the sister who saved her little

brother; Guesno Mardy-- the Haitian father who lost his son to slave traders; and Harriet Jacobs--a teacher for us all.

**Algorithms in Decision Support Systems** Vicente García-Díaz 2021-03-19 This book aims to provide a new vision of how algorithms are the core of decision support systems (DSSs), which are increasingly important information systems that help to make decisions related to unstructured and semi-unstructured decision problems that do not have a simple solution from a human

point of view. It begins with a discussion of how DSSs will be vital to improving the health of the population. The following article deals with how DSSs can be applied to improve the performance of people doing a specific task, like playing tennis. It continues with a work in which authors apply DSSs to insect pest management, together with an interactive platform for fitting data and carrying out spatial visualization. The next article improves how to reschedule trains whenever disturbances occur, together with an evaluation framework. The final works focus on different relevant areas of DSSs: 1) a comparison of ensemble and dimensionality reduction models based on an entropy criterion; 2) a radar emitter identification method

based on semi-supervised and transfer learning; 3) design limitations, errors, and hazards in creating very large-scale DSSs; and 4) efficient rule generation for associative classification. We hope you enjoy all the contents in the book.

Awakening in a bleak landscape, Cass Dollar vaguely recalls enduring something terrible. Having no idea how many days—or weeks—have passed, she slowly

realizes the horrifying truth: her daughter, Ruthie, has vanished. And with her, nearly all of civilization. Instead of winding through the once-lush hills, the roads today see only cannibalistic Beaters—people turned hungry for human flesh by a government experiment gone wrong. In a broken, barren California, Cass will undergo a harrowing quest to get Ruthie back. Few people trust an outsider—much less one who bears the telltale scars of a Beater attack—but she finds safety with an enigmatic outlaw, Smoke. And she'll need him more than ever when his ragged band of survivors learn that she and Ruthie have become the most feared, and desired, weapons in a brave new world...

**Stand Firm** Paul Gould

2018-11 In an age of skepticism and disenchantment, people long for something that satisfies our mind's search for truth and our heart's desire for beauty and meaning. **Stand Firm: Apologetics and the Brilliance of the Gospel** argues that the gospel satisfies both of these needs. It is true and rational, but it is also inherently attractive and provides meaning and purpose. In short, the gospel is brilliant. It is brilliant, in one sense, because of the broad variety of evidences for its truth. But it is also brilliant given its beauty, goodness and the meaningful life it offers. The book provides up to date responses to questions about the existence of God, the reliability of the Bible, Jesus and the resurrection, and the

problem of evil. It also treats unique topics such as understanding truth, knowledge and faith, the claims of alternate faiths, religious disagreement, etc. Each chapter attempts to connect these considerations with the gospel so that we may stand firm in our faith.

**Designing with Conifers**

Richard L. Bitner

2011-04-21 With blue,

green, and gold foliage and shapes ranging from

spiky to weeping,

conifers have the

potential to be garden

design stars. But they

are commonly misused in

gardens and landscapes,

leading to looming

spruces squashed against

a house or rows of

kettledrum-shaped yews

along a sidewalk. When

used correctly and

creatively, conifers can

be star players in

creating beautiful,

long-lasting plant

combinations or serene

backyard havens.

*Designing with Conifers*

shows readers exactly

how to choose the best

conifers for specific

needs. Chapters cover shape, color, and conifers for specific sites and conditions, including front gardens, hedges and screens, topiary, dwarf conifers, shade gardens, Asian-style gardens, bonsai, and miniature railroad gardens. Also includes useful appendices that list of conifers for various problems and conditions, like conifers for areas plagued by deer and the best conifers for Christmas trees and Southern gardens. Each section is enlivened with gorgeous color photographs. Whatever landscape situation or challenge a gardener designer faces, *Designing with Conifers* shows how to make the best choice from this beautiful, useful, and versatile group of plants.

Plane World By Charles H. Hinton What is the

Fourth Dimension? WHERE the sun's rays grazing

the earth in January pass off and merge into

darkness lies a strange world. 'Tis a vast

bubble blown in a substance something like

glass, but harder far and untransparent. And

just as a bubble blown by us consists of a

distended film, so this bubble, vast beyond

comparison, consists of a film distended and

coherent. On its surface in the course of ages

has fallen a thin layer of space dust, and so

smooth is this surface that the dust slips over

it to and fro and forms densities and clusters as its own attractions and movements determine. The dust is kept on the polished surface by the attraction of the vast film; but, except for that, it moves on it freely in every direction. And here and there are condensations wherein have fallen together numbers of these floating masses, and where the dust condensing for ages has formed vast disks. And these disks are glowing hot--yet no light comes from them into our universe. For this world lies beyond the aether--far beyond. And however hot or glowing the masses are, if there is no medium to transmit the vibrations of heat the influence cannot travel.

Moving from contemporary LA to the dorm rooms of an American college to ancient Pompeii, Eisenberg throws the reader into a universe of social misfits, reimagined scenes from history, and ridiculous overreactions; a college freshman forced to live with a roommate is stunned when one of her ramen packets goes
